

CARBON FOOTPRINT

STATEMENT OF POLICY

Recognising the increased awareness of climate change and every company's responsibility to manage its carbon footprint, the company has established a Carbon Footprint Policy Statement which will operate along similar lines to the Health & Safety Policy Statement.

This statement is supplemented by our Recycling and Environmental Policies. Each policy is kept as a separate entity to ensure adequate resources and management review time is afforded to each.

Carbon Footprint Policy Statement:

1. Establish the extent of our current carbon footprint and introduce measurement and monitoring processes going forward.
2. Drive initiative to reduce our carbon footprint across the company.
3. Investigate and implement programmes which promote the use of sustainable resources.
4. Champion and communicate programmes to reduce energy consumption across the company.
